

Barrango

Green Foliage

Barrango proudly is one of the most and last you will find available. We use a faster than industry average green UV resistant PVC for our foliage. Our injection machinery cuts, winds and spins the PVC into long strands which are then collected over Christmas trees, wreaths, garlands or garlands. We custom manufacture different styles of foliage. Mountain Pine, our classic real branch look. Santa Pine, our light weight holiday style. Ponderosa Pine, a long needle pine style shape and our custom Canadian Pine, great choice for our spectacular Light Show Feature Trees.

All of Barrango's Christmas trees are made with a solid stem framework with individual branches that flow long the top and come straight out. Using our Mountain Pine branches, we can create a true realistic looking tree with alternating branch lengths, creating natural looking spaces throughout the tree for larger ornaments. Or with our Canadian Pine branches, we create a custom look off our look to every strand but of the full pine lights throughout the tree, generating a 100% natural green and realistic lighting set up.

Don't forget that every tree, garland, wreath or branch we sell is all our plants are made in the USA. Our staff will make sure your tree is the perfect size for your space and we will help you with every step of the way to make sure you get the most out of your display and decorations.

Remember that Barrango's Christmas trees and decorations are made in the USA. Our plants are made in the USA. Our staff will make sure your tree is the perfect size for your space and we will help you with every step of the way to make sure you get the most out of your display and decorations.
